

Derio (Bizkaia), November 26th 2018

OWL Metabolomics renews Innovative SME seal, hallmark of Ministry of Science, Innovation and Universities for small and medium size enterprises (SMEs) with high investment activities that during the past years have carried out activities within the fields of Research and Technological Development and Innovation (R+D+i).

The Innovative SME seal, issued by the Ministry of Science, Innovation and Universities involves an acknowledgement of companies with a high innovation profile. The purpose with which the seal was created back in 2015 is to foster competitiveness within the Spanish business sector, especially among the small and medium enterprises that account for the 99,8% of the total number of companies in our country. It is a recognition for the commitment of the Company and the value added to the development of our economy and society.

This recognition is added to the Award of Innovation and Digitalization, which OWL received the past October 23rd during the Bizkaia's SME of the Year Awards, held by Banco Santander and the Spanish Chamber of Commerce, with the collaboration of EL CORREO press. The goal of this award is to recognize the accomplishment and work of the small and medium enterprises as providers of employment and wealth. The jury (consisting of Banco Santander, Banco Popular, Spanish Chamber of Commerce, Bizkaia Provincial Council and EL CORREO press) highlighted OWL's contribution to the innovation and big data fields.
